

Ex-best friends Annie and Mirra are shipwrecked and must try to survive on a remote island near Nova Scotia inhabited only by wild horses—or that’s what the fourteen-year-old girls think at first. Then they discover warm embers and strange footprints.

Amy Laundrie Presents

In this interactive STEM program, Amy will read excerpts from **STRANDED ON CASTAWAY ISLAND**. Afterwards, participants will move to various stations where for hands-on survival experiences including the following:

- Make a casting machine to help catch fish. I'll have supplies such as a soda can and string available.
- Make a shell necklace
- Try to get a spark using a fire drill
- Provide giant conch shells and an activity where students realize it's not the ocean they hear when they hold a shell up to their ear, but the sound vibrations from the room.
- Using twigs, canvas, and a small sand box, design a tipi or tent type shelter
- sample strawberry tea
